Multi-purpose End-To-End Robotic Operations Network

An overview of the Meteron experiments

Multi-purpose End-To-End Robotic Operations Network

An overview of the Meteron experiments

- 
- OPSCOM 1 First Disturbance Tolerant Network (DTN) in-flight demonstration
- OPSCOM 2 DTN validation with basic operation of Eurobot @ESA Darmstadt
- OPSCOM 3 Final DTN validation
- HAPTICS-1 Engineering calibration of 1-DOF exoskeleton joint @ISS
- HAPTICS-2 1-joint force reflection short and long time delay experiment @ESTEC
-
- SUPVIS-E Supervisory command of Eurobot rover @ESTEC
- SUPVIS-JUSTIN** **Supervisory command of Humanoid Robot @DLR**
-
- EXO-1 Exoskeleton control of robot arm @ESTEC
- EXO-2** **Exoskeleton control of DLR Humanoid Robot @DLR**
- EXO-3 Exoskeleton control of ROBONAUT @ISS (intended)

From Rotex to Meteron

DLR-RM teleoperation in space missions

Rotex (1993)

RokVISS (2004-2010)

Kontur (on-going)

Meteron (on-going)

<http://meteron.dlr.de/>

Meteron SUPVIS-JUSTIN

Supervised autonomy for a service robot in space

Abstract task level
robot commands

<http://meteron.dlr.de/>

SUPVIS-JUSTIN: ISS on-board hardware

Tablet user interface

- Dell Latitude 10
- Tablet PC
- Removable battery
- Windows 8.0

SUPVIS-JUSTIN: on-ground hardware

DLR dexterous mobile robot: Rollin' Justin

<http://meteron.dlr.de/>

SUPVIS-JUSTIN: on-ground hardware

Mars on earth: the SOLEX experiment environment

<http://meteron.dlr.de/>

Supervised autonomy experiment protocol I and III

Survey surrounding and mobile navigation

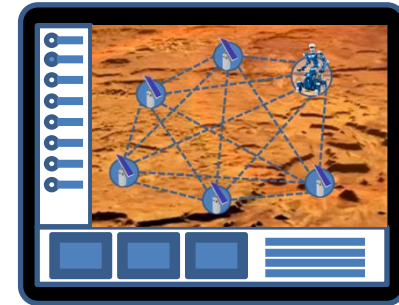

SOLEX Experiment Environment (@DLR-RM)

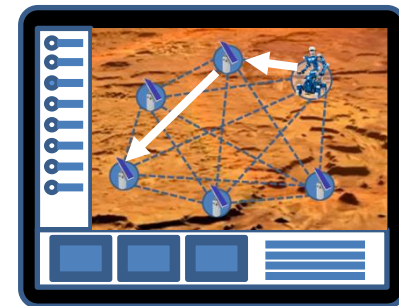

1.
Survey
destination
and
environment

2.
Select path

3.
Navigate to
target

Tablet (@ISS)

Supervised autonomy experiment protocol II

Solar panel unit inspection and repair

SOLEX Experiment Environment (@DLR-RM)

1.
Inspect SPU

2.
Shutdown
SPU

3.
Connect DIP
and establish
data link

Tablet (@ISS)

SUPVIS-JUSTIN goals

What do we hope to learn

- Tablet user interfaces design for use in space
 - Effectiveness
 - Usability
 - Astronaut immersability through a tablet UI
- On supervised autonomy:
 - Effects of time delay on communication between the operator and robot
 - Robotic terrain navigation
 - Dexterous robotic tasks
 - Supervised-autonomy in the space setting
- Better understand the crossover between supervised autonomy and real-time telepresence

DLR's future experiments in Meteron

EXO-2: from supervised autonomy to haptic feedback

Toward supervised autonomy for a service robot

On-going DLR development

Development of a human-robot interface for visualization of internal world states and controlling potential manipulation capabilities of semi-autonomous robot
Technical University of Munich, 2013

Meteron SUPVIS-JUSTIN

Timeline and milestones

Initial ESA-DLR Meteron presentation of interest	2010
Initial Supvis-Justin experiment conception	2012-07
Supvis-Justin experiment development	2013-08
Supvis-Justin requirements definition	2014-07
Supervisory tablet UI test:	2015-01
Ground hardware test (single unit):	2015-03
Full experiment ground tests:	2015-05~06
Astronaut training center:	2015-07~09
Planned mission date:	2015-10 (short duration flight)

**DLR Meteron SUPVIS-JUSTIN team
